DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2, 4, and 7-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Harrison et al.(5,260,343).

Harrison et al. discloses preparations of polyurethane foams from isocyanates as defined by applicants' claims, polyols as defined by applicants' claims, in the presence of water, as an economical, easy to use co-blowing agent, and thermally expandible microspheres, wherein the foams are prepared by methods encompassing of applicants' claims, and the products obtained have densities and other properties encompassing of applicants' claims (see the entire document).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3,5, and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harrison et al.

Harrison et al. cited for the reasons set forth in the rejection under 35 USC 102 set forth above. Harrison et al. differs in that it is not concerned with additional blowing agents beyond the expandible microspheres and the economical and easy to use co-blowing agent, water. However, Harrison et al.'s disclosure is replete with teaching encompassing of the knowledge to use additional additives within their procedures, and examiner holds that the endothermic blowing agents of applicants' claims are well known blowing agents in the art for the purpose of imparting their additive effect. Accordingly, it would have been obvious for one having ordinary skill in the art to have utilized acceptable and less economically feasible blowing alternatives within the procedures of Harrison et al. in order to arrive at the processes and products of applicants' claims with the expectation of success in the absence of a showing of new or unexpected results.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. McClellan et al. and Falke et al. are cited for their disclosures of relevant preparations in the urethane arts.
